input
community works

Input is a charity providing work preparation for people with additional educational needs.

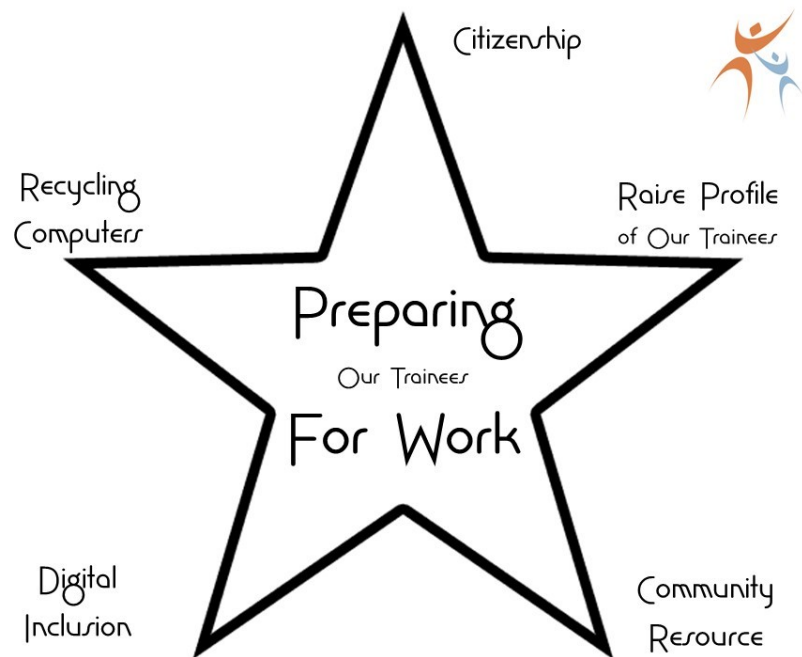

Our trainees recycle donated used computers for use by the local community. Through these tasks a work principle is developed and instilled.

As a community charity Input can only provide our services with donations from people and businesses like you.

The resources of Input, its trainees and volunteers are available for use by the community and to actively promote our trainees, the use of technology, recycling and education.

Scottish Charitable Incorporated Organisation SC043014

This diagram demonstrates the Charity's key goal and sub-goals or additional benefits through achieving our main goal.

Preparation For Work

Within an IT/Recycling workshop environment Input provides a work related future and purpose for people with additional educational needs. Our focus is on providing practical skills and real world experience not only in IT but in retail, marketing, customer service and admin/office support. With the assistance of volunteers from the local community emphasis is given to guidance and support during training and on-going custom preparation towards employment. Our aim is to support our trainees into appropriate employment.

Citizenship

Through the promotion of self-worth and respect we enhance the community and the sense of community within our trainees. The work activities enable confidence building and allow focus to be given to social awareness. We develop an understanding of the "rights and responsibilities" of being a citizen which develops independence, social integration and inclusion in society.

Raise Profile

The activities of Input provide a platform to inform and educate inclusion in our local community. We enhance the community's view of our trainees difficulties through integration and demonstration of a positive image. Through our trainee's activities we project a positive attitude within the media to reduce the stigma of those with additional needs.

Community Resource

Input provides training & education and a point of contact in the use of IT to the wider community by means of our trainees. Our refurbished computers which are made available to the community are tailored to the individual with the latest free software. This would be backed up with appropriate training in the use of the computer and the software installed. Through these ventures this opens up opportunities for locals to volunteer in support of the charity, it's trainees and the community, offering them experience and qualifications in the field. Our work with local businesses identifies their needs and secures opportunities for our trainees and volunteers. As a community resource we rely heavily upon the community giving to us, whether that is through volunteer's time, business's input or resource and financial involvement.

Digital Inclusion

By creating custom built computers from recycled parts we offer an opportunity to those excluded from the computing and internet arena to improve their opportunities. With the use of select free software best suited to personal needs and we are here to provide education, advice and support. Through the hardware, software and dedicated internet resource we are improving social involvement across a wide sector of the community.

Recycle Computer

Input provides a recycling point for unwanted computer equipment which would otherwise be destined for landfill sites or the back of a cupboard. Through our secure data destruction our volunteers re-use this equipment to provide computers for any local person who would benefit from our computer adoption scheme. Our volunteers and trainees gain skills in recycling and through our activities, one-off shows and exhibitions we promote recycling and carbon footprint throughout the area.
